TECHNICAL SKILLS

Programming Languages & Frameworks: Python, TypeScript, React, Next.js, Java

Tools & Platforms: PostgreSQL, AWS (Lambda, RDS), Firebase Auth, Microsoft Graph Api, GitHub

WORK EXPERIENCE

Solution Engineer | C3.ai (via Paradyme) | Redwood City, CA **Jan 2025 - Aug 2025**

- Delivered Generative AI pilots for diverse clients by developing scalable backend solutions in Python, JavaScript, and C3.ai's proprietary type system, and enhancing UIs with React and UISDL.
- Designed and configured data pipelines for structured/unstructured ingestion, MEW3 file chunking, scheduling, and email/Graph API integrations.
- Served as SE lead on Montana Department of Revenue GenAI Pilot, driving architecture decisions, deployments, and cross-functional collaboration.

Software Development Intern | Beecoming | Berkeley, CA **May 2022 - Aug 2022**

- Developed microservices in Javascript, exposing REST APIs to query information on prospective colleges.
- Collaborated with other interns to conduct market research and design new product features, including a feature to personalize college and course selections based on user preferences.
- Implemented automated Python scripts to minimize excess data stored in AWS S3 buckets.

Lead Computing Services Officer | Eta Kappa Nu (EECS Honor Society) | Berkeley, CA **Jan 2022 - Dec 2023**

- Utilized Ruby and Python (Django) to improve course survey data readability for students and faculty.
- Leveraged GitHub for issue tracking and peer collaboration, enhancing workflow efficiency.
- Provided administrative support for 100+ user accounts each semester, ensuring secure access to organizational systems and platforms.

PROJECTS

Virtual Garden Simulator | <https://react-virtual-garden.vercel.app>
2025

- Designed and developed an interactive farming simulator using React + Typescript frontend and Next.js + AWS Lambda + RDS backend, enabling scalable persistence of player progress.
- Integrated secure user authentication and session management with Firebase.
- Engineered a modular, object-oriented system with reusable components and reliable data serialization.

Android Word Game | <https://github.com/lo-maxwell/PangramsGame> **2023**

- Built a Java-based puzzle game in Android Studio using object oriented design principles and a NoSQL database for efficient local storage and user progress tracking.
- Utilized Git/ Github for version control and conducted manual cross-device testing to ensure stability.

EDUCATION

University of California, Berkeley

Dec 2023

B.S. Electrical Engineering and Computer Science | GPA: 3.5/4.0
